

About RPT

On the banks of the St. Joseph River in Bristol, a northern Indiana town of 1500 people and two stop lights, RPT designs and builds digital voice recording and retrieval systems.

The founders of RPT have almost 30 years experience in building 100's of reel to reel recorders that are being used throughout the world. The very first reel to reel voice logger installed, is still recording 24 hours a day, 7 days a week.

In 1997, Record/Play Tek, Inc. (RPT) began building strictly digital voice recording systems. We have a whole new way of looking at "voice logging", providing exciting products that reflect our new open systems, "Window's" environment with "click n play" technology.

RPT's solution to challenges in the communication marketplace often takes the simple route. An understanding of customer needs and innovative technology produces practical systems at an affordable price. We design and build our systems at our corporate offices in a renovated Greek Revival, Circa 1820 building on the Main Street in Bristol.

Over the years many friendships have developed around RPT's quality products and superior customer service. Come see us. We're 25 miles from the University of Notre Dame/South Bend.

Lets talk soon!
