

Alston Tascom, Inc. Work Force Management Application

Alston Tascom provides a unique Work Force Management/Client/Case Management and Incident Reporting Application that can be located on your site or hosted in our facility. As an example, these applications are used for but not limited to:

- Remote Employees
- Sales Representatives
- Home Nursing Staff and Clients
- Long Term Care Facilities and Staff
- Technical Service Personnel
- Home Health Care Staff and Clients
- Residential Care Facilities
- Correction Facilities Staff

These management applications are used to manage and track individuals such as employees, patients and clients. The management application maintains detailed information for employees, i.e. schedules, appointments, historical data, pictures for identification, and other facility required information. For patients and clients the same type of information is maintained as well as medications and medication schedules, treatment plans, and any special requirements. These applications can be customized to the organization for appearance, types of information, detailed reporting and “pick-list” reporting. Reports can be viewed on-screen, printed, faxed and /or emailed as required.

Incident Reporting is a separate application that can be used stand-alone or in conjunction with our Management application. Incident Reporting is used to log and maintain a record of events that are non-standard or require documentation and reporting. For example, in many private and government funded facilities, certain types of events such as illnesses, medication reactions, disturbances, etc., must be reported to several locations, in varying formats and at specific time intervals. Often, a delayed report results in penalties and fines. Reports are designated as to type and severity. This designation determines the reports required, locations that the report is to be submitted and the time or the time interval in which the report must be submitted. Reports can be printed, faxed and/or emailed. Custom Management reports are provided for review of incidents over time, by type, by name, by facility or from a “pick-list” as required.

Both applications are web-based and can be accessed via computer having internet capability using the correct username and password. Access to these applications is controlled and restricted based upon the “level” of the person logging into the site. Additionally, the data is secured for HIPPA compliance.

These applications are accessible with most TAS systems that offer web access. Both applications can be purchased and located on your site or, as an alternative to purchasing; they can be hosted by Alston Tascom. To review a demonstration of the applications go to <http://demo.tascominc.net> and select a application. The login is demo and the password is alston.

Utilizing the hosted applications has some very distinct advantages:

- No Monthly Maintenance Fees
- No Upgrade Fees
- One Time Set-Up Fee per Account
- Low Monthly Fee per Account

No Out-of-Pocket Expenditure until You Have the Account
